Claims 1, 2

Document 1: JP, 2003-32674, A (Kabushiki Kaisha Emaki), 31 January, 2003.

Document 2: JP, 11-337845, A (Mitsubishi Electric Co., Ltd.), 10 December, 1999.

Document 1 describes a device for generating a continuous developed image from video images from an inner wall of a tubular body, this device comprising pickup means for picking up the video image of the inner wall of the tubular body, digital image data fetching means for fetching the picked-up video image as digital image data, display means for displaying the generated developed static image, and output means for printing and outputting, wherein the developed static image generation means comprises pipe projection conversion means for generating a rotational image in the circumferential direction of the inner wall of the tubular body for each frame of the fetched digital image data and mosaic processing means for cutting and connecting the strips of each frame of the developed image produced by the pipe projection conversion means and converting them into continuous developed static image data having no seams. Document 2 describes a diagnostic apparatus for generating a developed image from the image of the inner wall of a hollow organ or body cavity and conducting a diagnostic of a disease based on the development image. Using the device described in document 1 for diagnostics of luminal organs as described in document 2 could have easily been conceived by a person skilled in the art. Document 2 also describes that the pick-up means is an endoscope camera comprising a wire.

Claim 3

Document 3: JP, 2003-275171, A (Olympus Optical Co., Ltd.), 30 September, 2003.

Document 4: JP, 8-79589, A (Toshiba Corp), 22 March, 1996.

A capsule-type small wireless video camera is well known as pick-up means, for example, as described in documents 3 and 4. Conducting the diagnostic of luminal organs by using the capsule-type small wireless video camera is also described in document 3.
